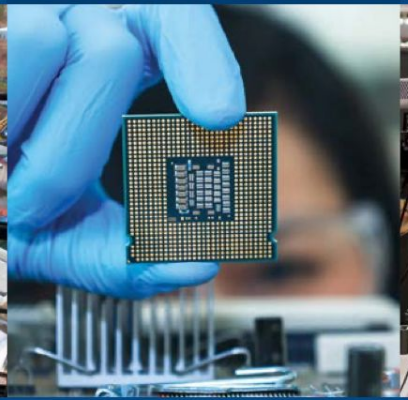
Intel’s Corporate Responsibility Report

[Driving sustainable progress through renewable energy, water stewardship, STEM impact, and inclusive innovation.

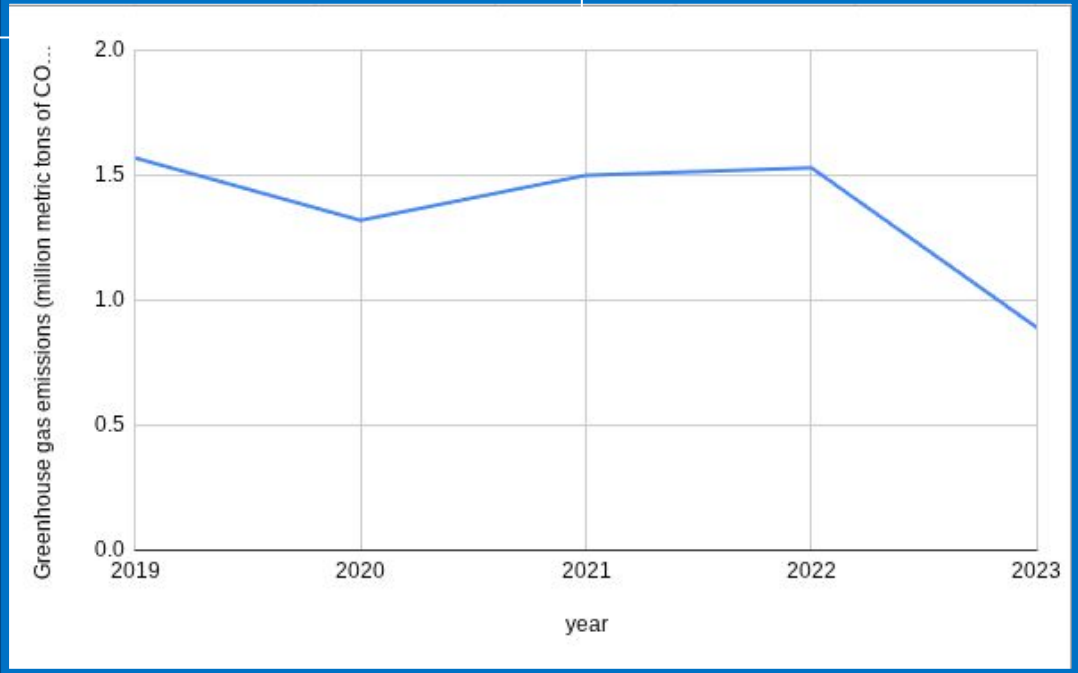
[Lizbeth Macias]



100% Renewable Electricity Across Intel's Operations

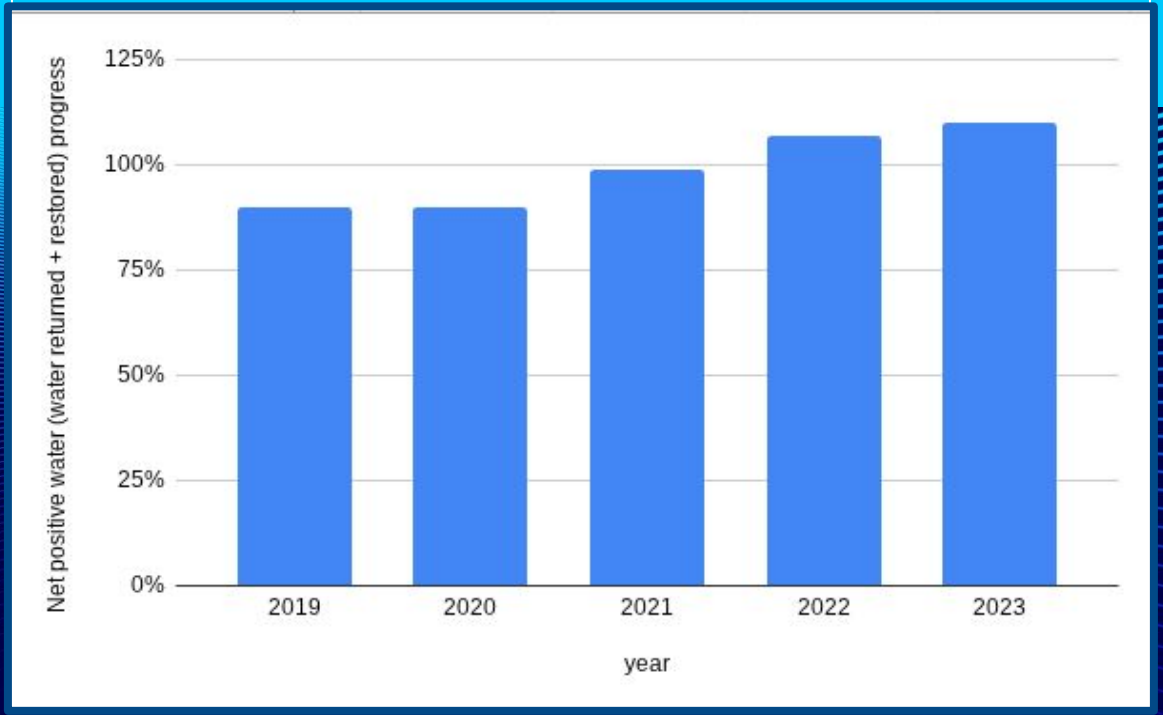
By 2023, Intel reached 100% renewable electricity usage in the U.S., Europe, Israel, Malaysia, Vietnam, China, and is nearing 100% in Costa Rica.

Intel’s global shift to clean power demonstrates leadership in shaping the future of sustainable energy.



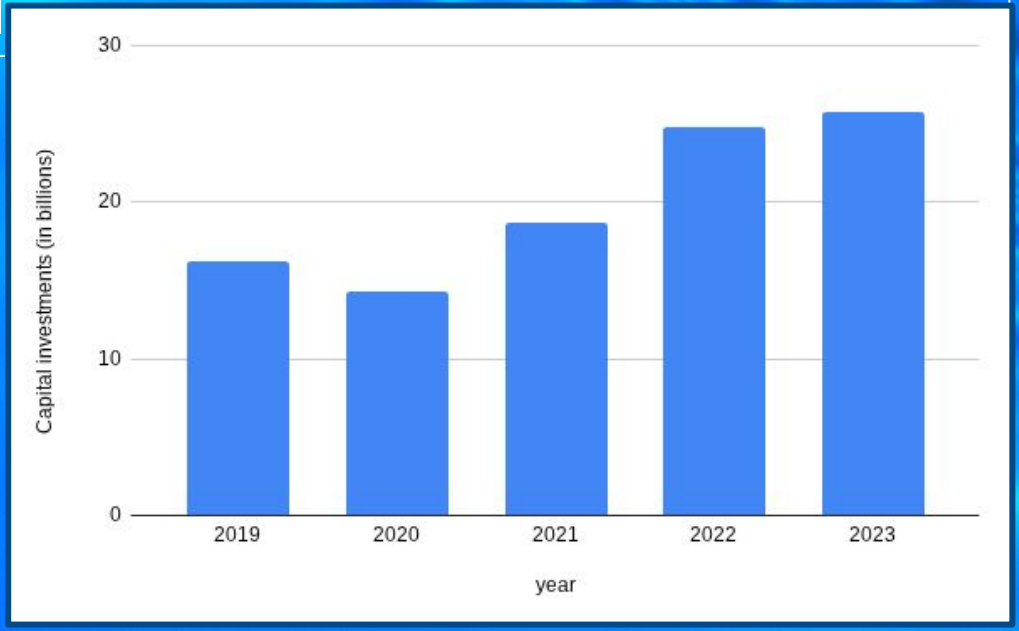
36 Billion Gallons of Water Saved Since 2020

In 2023, Intel achieved *net positive water*, returning and restoring more water than it consumed. Saving 36 billion gallons demonstrates how technology and sustainability can scale together.



1.5 Million Students Reached Through Global STEM Programs

By 2023, Intel invested over $25B in innovation while empowering 1.5 million students worldwide through STEM opportunities — fueling the talent pipeline for tomorrow's technologies.

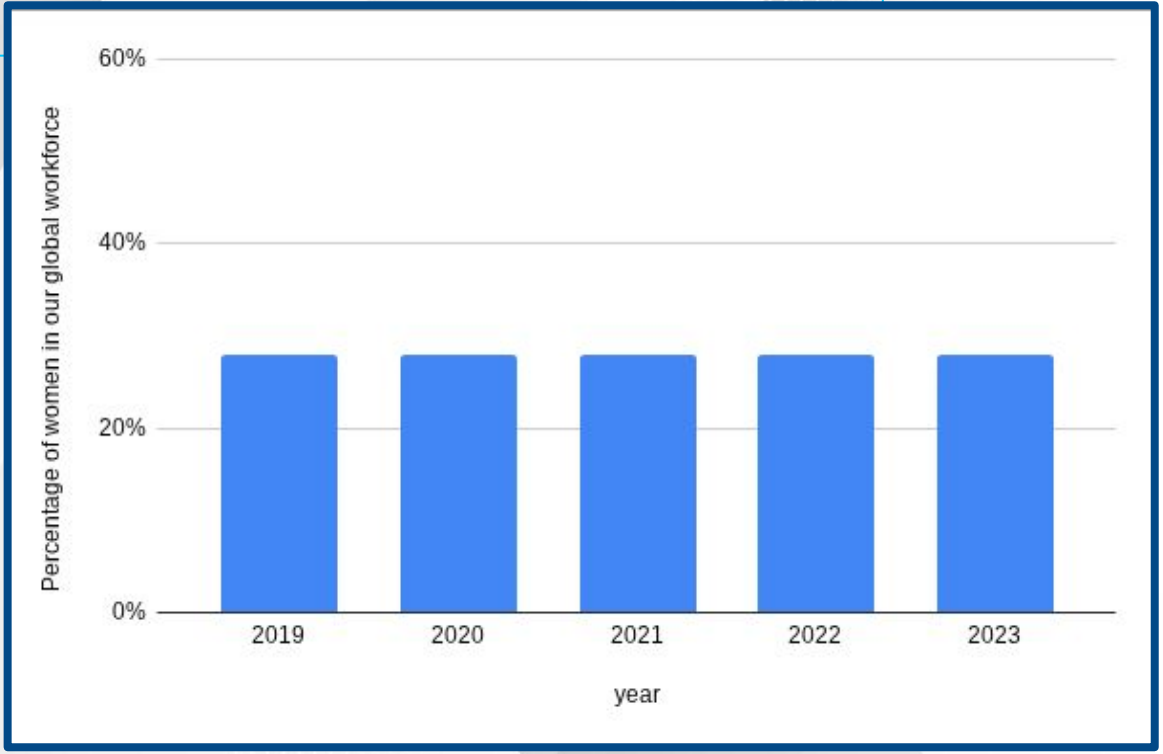


Building A More Inclusive Global Workforce

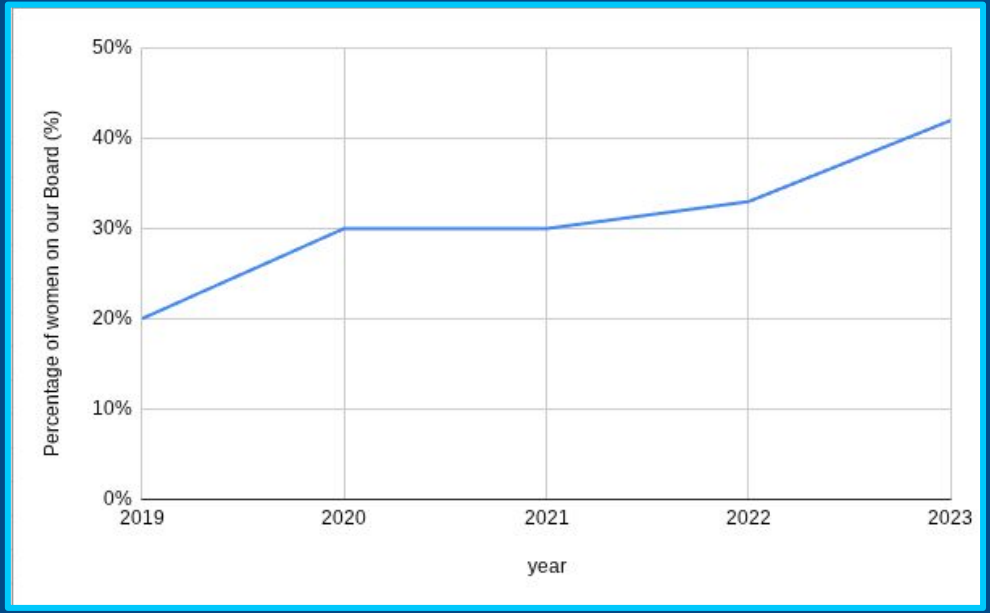
In 2023:

- 8,642 interns engaged globally
- 58% of past interns converted to full-time roles
- Women represented nearly 28% of Intel's workforce

These milestones reflect progress toward a more diverse and sustainable workforce.



Inclusive Leadership And Long-Term Investment



From 2019 to 2023, Intel:

- Invested over $25B in capital projects
- Increased women's representation on its Board from 20% to over 40%

This growth shows Intel's commitment to innovation and inclusive leadership.
